

ABS-Lock X-First II

Fall Protection Anchor Wood | screwed

One anchorage point covers both sides of your roof

ABS-Lock X-First II is what we call our stainless steel anchorage point specially designed for the roof apex. This fall arrest device is extremely practical - from both an installation and usage point of view. The anchor base plate can be manually adjusted to fit any roof pitch. Once that is done, simply screw it onto the rafters using the 8 screws supplied. As the anchorage point is fixed to the center of the apex, it serves to protect individuals from falling from either side of the roof surface.

All ABS-Lock-First II components are made of weather-resistant stainless steel: The rod, the pre-bent base plate and even the screws used to mount the device. Our anchorage point is suitable for use in all directions of load.

Combine this fall arrest device with matching Personal Protective Equipment (PPE): Click here for more information on our [PPE roofer kit](#).

- EN 795:2012, A + CEN/TS 16415:2013
- Simply screwed onto the roof apex
- Suitable for usage on both sides of your roof
- Min. roof rafter dimensions: 80 mm x 120 mm
